

Figure 5. Common entry points used by bats.

Down chimneys and where chimneys and other masonry meet the side of a house

Joints between window frames and house siding

Joints around large exterior beams

At building corners

Where pipes or wires penetrate the ceiling or walls in attics

Between porches or other additions and the main house

At roof edges, ridge caps, soffits, and fascia boards

Where walls meet eaves at the gable ends of an attic

In gaps under shingles.
